

PROJECT INITIALIZATION AND PLANNING PHASE

Define Problem Statements

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Team ID: SWTID-2026-6530

Customer Problem Statement

Problem Statement	I am	I'm trying to	But	Because	Which makes me feel
PS-1	An IT procurement team member requesting a standard laptop	Get a standard laptop configured promptly after the request is approved	The configuration task is not automatically generated and assigned	The existing procurement process involves manual intervention and task assignment	Frustrated due to delays and increased waiting time
PS-2	An IT procurement team member	Ensure the Hardware team receives the laptop configuration task on time	The task assignment can require manual handling	There is no automated workflow connecting the approved request to the Hardware team	Concerned about delays and inefficient resource utilisation
PS-3	An employee requesting a standard laptop	Receive the laptop as quickly as possible	Laptop configuration may be delayed after the request	Standard laptop procurement and configuration activities are not fully automated	Inconvenienced because of the longer waiting time

Final Problem Statement

I am an IT procurement team member requesting a standard laptop.

I'm trying to ensure that the laptop configuration task is created and assigned to the Hardware team immediately after approval.

But the current process involves manual intervention and may cause delays in task creation and assignment.

Because the standard laptop procurement and configuration workflow is not fully automated.

Which makes me feel frustrated and concerned about delays, increased user waiting time, and inefficient resource utilisation.

Problem Focus

The main problem identified is the **lack of automation in the standard laptop procurement and configuration process**. The project therefore focuses on using **ServiceNow Flow Designer** to automate Catalog Task creation and assignment to the Hardware team.
