

PROJECT PLANNING PHASE

1. CUSTOMER SEGMENT(S) [CS]

- IT Procurement Team
- IT Hardware Team
- Employees / Users requesting standard laptops
- IT Service Desk / IT Administrators

2. PROBLEMS / PAINS + ITS FREQUENCY [PR]

Problems / Pains:

- Standard laptop orders involve manual processing.
- Laptop configuration tasks may be overlooked or delayed.
- Manual task assignment creates additional workload.
- Users have to wait longer to receive configured laptops.
- Procurement resources are not efficiently utilized.

Frequency:

Occurs whenever a standard laptop is requested through the IT procurement process.

3. TRIGGERS TO ACT [TR]

- Employee submits a standard laptop request.
- A service catalog request is created.
- Approval for the laptop request is completed.
- Hardware configuration needs to be initiated.

4. EMOTIONS BEFORE / AFTER [EM]

Before:

- User frustration due to waiting.
- IT team workload and pressure.
- Uncertainty about task status.
- Concern about delays and missed configuration tasks.

After:

- Faster and smoother procurement process.
- Reduced user waiting time.
- Better task visibility.
- Less manual effort for the IT team.
- Improved user experience.

5. AVAILABLE SOLUTIONS – PROS & CONS [AS]

Available Solution: Manual Procurement Process

Pros:

- Existing process is familiar to the IT team.
- Does not require initial workflow automation setup.

Cons:

- Requires manual task creation and assignment.
- Configuration tasks can be delayed or overlooked.
- Higher possibility of manual errors.
- Increases workload for IT staff.
- Can increase user waiting time.

6. CUSTOMER LIMITATIONS [CL]

- Dependence on manual IT processes.
- Limited time and resources of the IT team.
- Possibility of human errors.
- Need for proper ServiceNow access and configuration.
- Users depend on IT staff for timely laptop configuration.

7. BEHAVIOR + ITS INTENSITY [BE]

- Users submit laptop requests through the Service Catalog.
- IT teams manually process and monitor requests.
- Hardware team receives configuration-related tasks.
- Users wait until the laptop is configured and ready.

Intensity:

High, because delays in configuration directly affect the user's ability to receive and use the laptop.

8. CHANNELS OF BEHAVIOR [CH]**Online:**

- ServiceNow
- Service Catalog
- Flow Designer
- Requested Item / Catalog Task records

Offline:

- IT Procurement Team
- Hardware Team
- Employee/User communication

The project specifically uses ServiceNow Service Catalog and Flow Designer as the main online workflow channels.

9. PROBLEM ROOT / CAUSE [RC]

The main root cause is the **lack of automation in the standard laptop procurement and configuration process.**

Manual task creation and assignment can result in:

- Delays
- Missed configuration tasks
- Increased manual intervention
- Inefficient resource allocation
- Longer user waiting time

This matches the project's stated problem that the current procurement process lacks efficiency and automation.

10. YOUR SOLUTION [SL]

Automated Standard Laptop Procurement Workflow using ServiceNow Flow Designer

The solution is to create a Flow Designer workflow that automatically creates a **Catalog Task** after the service request is approved and assigns the task to the **Hardware** group for laptop configuration.

The flow includes:

- Service Catalog trigger
- Create Catalog Task action
- Automatic short description and description
- Assignment to Hardware group
- Approval condition
- Automatic task generation
- Flow assignment to the Standard Laptop service catalog

This directly follows the implementation described in your project document
