

Code-Layout, Readability and Reusability

Team ID: SWTID-2026-6530

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Maximum Marks: 5 Marks

Code Layout Checklist

S.No	Code Quality Parameter	Description	Followed	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	Yes	The Flow Designer configuration follows a structured sequence of triggers, actions and field values.
2	Proper File Structure	Files and folders are logically organized	Partial	The project documentation is organized into milestones and activities, but a detailed source-code file structure is not provided.
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Names such as Standard Laptop Task , Requested Item Record , and Assignment Group clearly describe their purpose.
4	Function / Method Names	Functions are descriptively named	Yes	The Flow and action names such as Create Catalog Task clearly represent their purpose.
5	Code Comments	Inline and block comments explain logic	Partial	The documentation provides detailed step descriptions, but actual code comments are not shown.
6	Modular Design	Code is split into reusable functions/modules	Yes	The workflow is separated into Flow creation, Flow assignment and Service Catalog activities.

S.No	Code Quality Parameter	Description	Followed	Remarks
7	No Redundant Code	Duplicate or unused code is removed	Yes	The project removes remaining/old automations before adding the new Flow to the Standard Laptop service catalog.
8	Error Handling	Exceptions and errors are handled gracefully	Partial	The document does not provide detailed error-handling or exception-handling configurations.

Reusable Components / Modules

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level
1	Standard Laptop Task Flow	ServiceNow Flow Designer	Standard Laptop Service Catalog	High
2	Create Catalog Task	ServiceNow Flow Designer	Laptop configuration task creation	High
3	Service Catalog Trigger	ServiceNow Flow Designer	Standard Laptop request process	Medium
4	Hardware Assignment Group	ServiceNow	Laptop configuration task	Medium
5	Approval Condition	ServiceNow Flow Designer	Approved Standard Laptop requests	Medium

The project specifically creates a Flow named “**Standard Laptop Task**”, uses a **Service Catalog** trigger, and uses **Create Catalog Task** as the action.

Overall Code Quality Assessment

Aspect	Rating (1-5)	Comments
Code Layout & Structure	4	The workflow is organized into clear milestones and activities, with a defined Flow, trigger and action structure.

Aspect	Rating (1-5)	Comments
Readability	4	Flow/action names and field values are descriptive and easy to understand.
Reusability	4	The Flow and Catalog Task components can be reused for similar laptop procurement workflows.
Documentation / Comments	4	The project contains detailed step-by-step documentation for creating and configuring the workflow.
Overall Score	4 / 5	The documented workflow has a clear structure, readable naming and reusable automation components.

Summary

The project demonstrates a structured ServiceNow Flow Designer implementation for automating the Standard Laptop procurement process. The Flow automatically creates a Catalog Task after approval, updates the task information, and assigns it to the **Hardware** group.

The documentation also explains how the Flow is attached to the Standard Laptop service catalog and how the generated Catalog Task can be checked for its updated status, short description and assignment group.

Overall Code Quality: 4 / 5
