

CODING & SOLUTION

Team ID: SWTID-2026-6530

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Maximum Marks: 5 Marks

Solution Summary

Field	Details
Repository Link / URL	N/A – Repository link is not provided in the project documentation
Programming Language(s)	ServiceNow Flow Designer / Configuration-based implementation
Framework(s) Used	ServiceNow Flow Designer
Key Features Implemented	Standard Laptop Service Catalog, request and approval process, automated Flow, Catalog Task creation, Hardware assignment, task status tracking
Pending / Incomplete Features	No pending features are specified in the project documentation
Setup / Run Instructions	Open ServiceNow → Navigate to Flow Designer → Create/Configure the Standard Laptop Task Flow → Configure Service Catalog trigger → Add Create Catalog Task action → Set Hardware assignment group → Save and Activate the Flow → Attach the Flow to the Standard Laptop Service Catalog

Solution Implementation

The solution automates the Standard Laptop procurement process using **ServiceNow Flow Designer**. The Flow is configured with a Service Catalog trigger and a **Create Catalog Task** action. The generated task contains the required laptop configuration information and is assigned to the **Hardware** group after approval.

The Flow is then associated with the **Standard Laptop** service catalog item so that the automation is executed when the service is requested.

Key Features Implemented

1. Standard Laptop Service Catalog

- Provides the Standard Laptop request option.
- Users can select the item and place an order.

2. Request Approval

- The submitted request can be reviewed and approved.

3. Automated Flow

- A Flow named **Standard Laptop Task** is created.
- The Flow uses a Service Catalog trigger.

4. Automatic Catalog Task Creation

- The Flow creates a Catalog Task after the required approval.
- The short description is set to **“Laptop need to Configured.”**

5. Hardware Team Assignment

- The Catalog Task is assigned to the **Hardware** assignment group.

6. Task Status Tracking

- The generated Catalog Task can be opened to check its status, short description and assignment group.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Partial
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	No / Not Provided

Additional Notes / Comments

The solution is implemented using **ServiceNow Flow Designer** rather than a conventional programming-language-based application. The workflow is divided into clear activities including Flow creation, Flow assignment and Service Catalog ordering.

The project documentation provides detailed implementation steps and demonstrates the expected result by checking the generated Catalog Task and its updated status, short description and assignment group.

Detailed source-code error handling and a version-control repository are not documented in the project materials. Therefore, these items should be added only if they are actually available in the implementation.

Overall Solution

The implemented solution addresses the project problem by automating the Standard Laptop procurement and configuration workflow. It reduces manual intervention by automatically creating and assigning configuration tasks after approval, supporting faster laptop configuration and improved IT procurement efficiency.
