

PROJECT EXECUTABLE FILES

Team ID: SWTID-2026-6530

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Executable Files

This project is implemented using ServiceNow Flow Designer to automate the standard laptop procurement and configuration process. The project files and implementation details should be organized and submitted according to the project requirements. The executable implementation is available within the ServiceNow Developer Instance.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted
1	Complete source code (all files and folders)	NA – ServiceNow Configuration
2	README / Setup Guide	Yes
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files	NA – ServiceNow Database
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL	ServiceNow Developer Instance URL
7	APK / Executable binary	NA
8	Dockerfile / Containerization config	NA
9	Test files and test results	Yes – Flow Testing
10	Demo video / walkthrough	If Required

The project uses ServiceNow Flow Designer rather than a conventional source-code application, so items such as package.json, .env, APK, and Dockerfile are not applicable.

Step 2: File / Folder Structure

ServiceNow Developer Instance

ServiceNow Project

The project implementation creates a Flow named “**Standard Laptop Task**”, which creates a Catalog Task and assigns it to the **Hardware** group after approval.

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	ServiceNow Developer Instance
Login Credentials (Demo)	ServiceNow Developer Instance credentials
Platform / Hosting Provider	ServiceNow

Field	Details
Repository Link	NA – ServiceNow Configuration
Demo Video Link	If Required

Step 4: Run Instructions

1. Open the **ServiceNow Developer Instance**.
2. Navigate to **All → Service Catalog**.
3. Open **Hardware**.
4. Select **Standard Laptop**.
5. Click **Order Now** to place the request.
6. Open the created request and navigate to the **Approvers** section.
7. Approve the request.
8. Open the **Requested Item** record.
9. Scroll to the **Catalog Tasks** section.
10. Open the generated Catalog Task.
11. Verify that the task has the correct **Short Description** and is assigned to the **Hardware** group.

These steps follow the execution flow documented in your project: Standard Laptop → Order Now → Approval → Requested Item → Catalog Task.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	ServiceNow Developer Instance access is required.	Use an active ServiceNow Developer Instance.
2	Flow execution depends on the laptop request being approved.	Approve the request before checking the Catalog Task.
3	Hardware assignment depends on the configured Assignment Group.	Ensure the Hardware group is available and correctly configured.

Final Project Flow

**Service Catalog → Standard Laptop → Order Request → Approval → Flow Designer →
Create Catalog Task → Hardware Group → Laptop Configuration**
